PROFESSIONAL SUMMARY

Final-year cybersecurity student (Computer Science and Engineering, Cyber Security) at Park College of Engineering and Technology, with practical exposure to vulnerability assessment, network security, and web application security across 2 cybersecurity internships, 3 hands-on projects, and structured training. Designed and monitored a network security honeypot to capture and analyze unauthorized access attempts, applying Wireshark for traffic inspection and Nmap for network reconnaissance, alongside OWASP Top 10 concepts and penetration testing fundamentals in project and lab work. Comfortable working across Linux and Windows environments and using Burp Suite, Splunk, and Autopsy in coursework and training settings. Applies risk-analysis thinking to independent projects, including a scam-detection platform built with URL analysis and risk-scoring logic. Holds 4 certifications and training credentials, including ISC2 Certified in Cybersecurity.

TECHNICAL SKILLS

Vulnerability & Security: Vulnerability Assessment, Penetration Testing Fundamentals, OWASP Top 10, Network Security, Web Application Security, Unauthorized Access Detection

Security Tools: Wireshark, Nmap, Burp Suite, Splunk, Autopsy, FTK Imager

Networking & Operating Systems: Windows, Linux, Networking Fundamentals

Programming & Scripting: Python, Bash Scripting, Regular Expressions

Automation / Version Control: Git, GitHub

INTERNSHIP EXPERIENCE

Cyber Security Intern | Codec Technologies
Hybrid, India

- Completed project-based cybersecurity assignments and training modules under a project head, working remotely through the organization's internship platform.

Ethical Hacking Intern | iStudio
Pune, Maharashtra

- Qualified for the internship via the Internship Common Aptitude Test (iCAT) and completed structured hands-on training in ethical hacking techniques, including vulnerability identification and assessment fundamentals.

PROJECTS

Network Security Honeypot Lab

- Designed and deployed a honeypot to detect and monitor unauthorized network access attempts.
- Analyzed captured attack patterns and reconnaissance activity using Wireshark to identify common intrusion techniques and network-level weaknesses.
- Documented findings to build a working knowledge of network-based threats and vulnerabilities relevant to security assessment work.

Campus Shield

- Built a web-based platform with URL analysis and risk-scoring logic to identify and flag high-risk internship and course listings.
- Applied basic risk-analysis principles to help students recognize phishing-style red flags and scam indicators before engaging with unverified sites.

Fact Checker Browser Extension

- Built a browser extension (HTML, CSS, JavaScript) that analyzes content and verifies sources to flag misleading or unreliable information.
- Applied source-credibility checks as a lightweight risk-assessment approach to evaluating unverified online content.

EDUCATION

Bachelor of Engineering (B.E.), Computer Science and Engineering (Cyber Security) — Expected 2027
Park College of Engineering and Technology, Coimbatore, Tamil Nadu
CGPA: 8.11 (up to 6th sem)

CERTIFICATIONS & TRAINING

- Certified in Cybersecurity (CC) — ISC2
- Cyber Security – Practical Training — Adaovi
- Cisco LABS Crash Course — EC-Council
- FCF – Getting Started in Cybersecurity 2.0 — Fortinet Training Institute

LANGUAGES

Tamil, English
